Command your defense with

Active ingredient

Imidacloprid 30.5% SC

Protecting homes with trusted results

- Effective against termites in both pre and post-construction phases
- Provides a reliable anti-termite treatment

How does Zevictra® TC achieve results?

Imidacloprid acts as an antagonist for the nicotinic-acetylcholine receptor in the insect's central nervous system

This affects signal transmission, causing nerve cell over-excitation

Eventually, this leads to nervous system dysfunction and death of the treated insects

Minimal dosage, maximum impact

Mix 2.1 ml of Zevictra® TC with 1 litre of water for pre and post-construction anti-termite treatment in buildings

Note: Follow latest BIS specifications i.e. IS 6313 : 2001 (Part 2 & Part 3) up to latest amendments for pre and post-construction treatments

2.1 ml  Zevictra® TC

Available in packs of 250 ml, 1 litre and 5 litres

Zevictra® TC benefits that shine

Undetectable protection

Non-repellent formula prevents termites from detecting protection zone

Enhanced exposure

Promotes domino effect for better control

Widespread colony management

Exposed termites transfer toxicant to others, leading to a colony-wide impact

Compliance assurance

Conforming to BIS specification IS 16131: 2015 for effective termite treatment.

Expert validation

Imidacloprid 30.5% SC* molecule is evaluated and tested by Central Building Research Institute (CBRI) for 5 years

Trusted by professionals

Simplifies termite treatment for pest control experts, ensuring efficient application
